The idea: Build a new educational unit

## Computational science:

using computers to  
analyze and solve  
scientific and  
engineering problems.

**Knock down silos**

11

## Why Now?

The world is changing, and Science/Engineering needs to change with it.

High performance **computing**  
pervades all of science and  
engineering today.

On your desktop:

12

## Why Now?

The world is changing, and Science/Engineering needs to change with it.

Advanced **algorithms** are changing the way we predict and control our world.

13

13

## Why Now?

The world is changing, and Science/Engineering needs to change with it.

**Data** is be generated at unprecedented rates from unprecedented sources with unprecedented uses.

14

14

## What are the options and issues?

**Options:**

- A new Degree
- A University Center or Institute
- A New Department

**Major Issues:**

- Where would it live?
- How would it be managed?
- Where will we get the resources?
- How long will it last?

15

## Good: A New Degree

**Pros:**

- Fast / Easy to implement given current university bureaucracy.
- Existing administrative resources to build from.

**Cons:**

- Which department owns the new major and takes up the responsibility?
- What do these departments give up to make the new degree?

16

## Better: A University Center or Institute

### Pros:

- Strong support from university if built from grant support.
- Does not take resources away from existing units.
- Can be centrally located and help break down silos between units.

### Cons:

- Generally requires a grant or external funding to move forward.
- Often does not live past the lifetime of the grants.
- Does not easily allow for a degree program.

17

## Best: A New Department

### Pros:

- Likely to stick around for a long time and represents a strong buy-in from the university.
- Ability to build a solid culture/program from scratch.
- Allows for multiple degree programs.

### Cons:

- Very costly and often requires scavenging funds and people from existing departments.
- Requires buy-in/approval from entire university.
- If done incorrectly could become just another silo.

18

Where do the resources come from?

- Faculty?
- Staff?
- Space?

19

Global Impact Initiative  
MICHIGAN STATE UNIVERSITY

Research@MSU

Through the MSU Global Impact Initiative, MSU will recruit more than 100 new faculty investigators to our research team to help accelerate finding solutions to the recognized “Grand Challenges.”

20

Department of Computational Mathematics Science and Engineering

Est. 2015

- Jointly operated by Colleges of Natural Science and Engineering
- Composed of 25-30 FTEs, including some current MSU faculty and a larger number of **new hires**.
- Most faculty will have joint appointments across campus.
- Faculty focus on data science and large-scale/high-performance computation
- Faculty are incentivized to engage in cross-discipline and cross-college research collaborations

<http://cmse.msu.edu>

21

22

## Educating the modern workforce

Modern STEM workers need to be able to build and use computational models, analyze massive amounts of data, and communicate these results to make decisions.

CMSE is meeting these needs for internal and external partners!

- Introductory courses (undergrad and grad)
- Undergrad minor and graduate certificates
- Bioinformatics training
- CMSE PhD and dual PhD programs
- Fall 2019 - BS in Data Science
- Comming 2021 – MS in Data Science

23

23

## STEM Gateway Courses

CHEMISTRY

PHYSICS

BIOLOGY

MATH

COMPUTATION

24

## CMSE 201/202 Computational Modeling

- CMSE 201- **Introduction to Computational Modeling**
- CMSE 202 - **Computational Modeling - Tools and Techniques**
  - Working with data: analysis and visualization
  - Creating models
  - Comparing data to models
- Very popular! 4 sections (x 36 to 70 students/section)
- CMSE 201 now required for all data science, physics/astrophysics and biochemistry majors, selective in Economics BA/BS and Quantitative Social Science minor (growing trend in this direction)

25

25

## Course Content

**Agenda for today's class (110 minutes)**

1. (5 minutes) Review of pre-class assignments and concepts of graph theory.
2. (5 minutes) Group project - Draw a graph - Seven Bridges of Königsberg
3. (20 minutes) Spiral - Games with graphs
4. (5 minutes) Group Discussion - Brainstorm ideas for a good graph module in Python?
5. (15 minutes) Group work, search / find resources to work with graphs
6. (20 minutes) Introduce students to the web scraping example/network
7. (20 minutes) Simple Web scraping example

**Training in Computational Modeling**

- Focus on Models with Social Impact
- Core Gateway Classes
- Flipped Classrooms
- Multidisciplinary

<http://cmse.msu.edu>

**NatSci**

26

27

## Growth of 201/202

28

## Graduate Service Courses

CMSE 801 - INTRO TO  
COMPUTATIONAL MODELING

CMSE 802 – METHODS IN  
COMPUTATIONAL MODELING

BIOINFORMATICS TRAINING:  
CROSS DISCIPLINE TOOLS

29

29

## Bioinformatics

- Centralized bioinformatics training program supporting graduate students and post-docs in 6 colleges and ~2 dozen departments.
- Program intended to be highly modular and extensible: 1-credit courses with short prerequisite chains

Designed specifically to support life science grad student needs

30

30

## PhD in CMSE

### Core graduate qualifier courses

- Math foundations of Data Science
- Numerical Differential Equations
- Parallel Computing
- Numerical Linear Algebra

### Special topics courses

- Optimization
- Topological Analysis of Large Datasets
- Computational Methods for Uncertainty Quantification
- Scientific Image Understanding
- Particle-Based Simulation Methods
- Next generation computing Architectures
- Etc.

31

## MSU Dual Major program

Single Dissertation

Research reflects contributions to both majors

Students must satisfy some of the qualifier requirements in both majors

Program is extremely popular

32

## Full-time Departmental Growth

33

## Future Work

Continue to develop our undergraduate programs.

Internships for graduate and undergraduate students.

Hiring more faculty including an external chair.

Connecting with other universities and institutions to promote the idea of computation as an academic discipline.

34
